

series
892E
2-Stage Servovalve
Rated flows up to 230 l/m

Features

- Maximum operating pressure 315 bar
- Electric feedback at main stage spool
- ISO 10372-04-04-0-92 mounting pattern
- External pilot supply (5 port)
- Suitable for 3-way or 4-way applications
- Low hysteresis & zero point drift
- High spool drive forces
- Spool in bushing design
- Long life Sapphire Technology

Sapphire ball in slot design

- Incorporated into Star designs since 1988
- Many billions of cycles per service life
- Increased spool life due to spool rotation
- Ultra low coefficient of friction sapphire to steel
- Feedback mechanism unhindered by spool rotation
- Extended warranties available

Safety

- Flame proof
- Intrinsic safety
- Class, Div & Zone coverage
- Mechanical failsafe
- Double & triple coil redundancy

Quality

- Independent audit process is our commitment on quality
- Focus on customer needs and expectations
- Delivery schedules on time
- Continual improvements on products and services
- Maintaining design and manufacturing integrity

Custom spool lap & bushing port geometries

- Zero overlap
- Overlap (closed center)
- Underlap (open center)
- Dual gain
- Asymmetric gain

Sapphire flow

- Ensuring first stage stability
- Precisely matched flow properties
- Long life in extreme environments

Special projects

- Compact servo designs
- Special interfaces
- Modular components

Sealing materials

- Nitrile
- Fluorocarbon (Viton)
- Ethylene-Propylene
- Fluorosilicone

Special connectors

- MIL-C-5015
- MIL-DTL-38999
- Conduit style male/female
- Hermetic

Mounting pattern		ISO 10372-06-05-0-92 with X port
Mounting position		Any, fixed or movable (1)
Weight	std unit additional filter housing	3.7 kg 5.0 kg
Design protection	EN 60529	IP 65
Shipping protection		Sealed base plate
Vibration		30 g all axis, 5 Hz to 2,000 Hz
Shock		30 g all axis
Seal material options		NBR, FPM
Temperature range		-20 to 80 °C

(1) Depending on valve orientation the main stage spool may drop when supply pressure is switched off leading to unwatered startup bump. If so then an external pilot supply model (892) is suggested, this allows startup of the first stage via the X port prior to applying pressure at the main stage.

Technical data

The flow tolerance for standard servovalves is $\pm 10\%$ of the rated flow at 100% rated input signal.

Rated Signal [In] is the specified input voltage or current of either polarity to produce rated flow. Rated input does not include null bias values.

Rated flow corresponds to the flow at rated input at 10 bar or 70 bar, with no load, therefore in 4-way valves there will be a pressure drop of 5 bar or 35 bar respectively across each land.

Load pressure difference versus input signal indicates typical differential pressure gain between ports C1 (A) and C2 (B) for standard lap spools. Negative and positive overlap change this characteristic significantly.

Internal leakage comprises of tare first stage and laminar leakage between spool and sleeve. With critical lap conditions in 4-way designs the leakage peaks through the null region.
